## ***Introduction***

This documentation is for a revised implementation of the CMG classification system for use in classifying patients in Inpatient Rehabilitation Facilities (IRFs). This new implementation is delivered as a Java Archive (JAR) library and represents version 5.30 of the CMG classification system with the JAR version being 5.30.0. This new version (5.30) applies to assessments with discharge date on or after October 1, 2023. For a description of the changes with CMG version 5.30, and an explanation of the new JAR versioning scheme, see the "Changes with CMG Version 5.30 and JAR Version 5.30.0" section later in this document.

Note that version 5.30.0 of the JAR is backwardly compatible with prior CMG classification versions 3.10, 4.00, 4.01, 5.00, 5.10, and 5.20 and it will calculate the CMG group code for all IRF-PAI assessments with discharge date on or after 10/1/2018.

This documentation and the CMG JAR are published by the Centers for Medicare & Medicaid Services (CMS). The documentation and JAR may be copied freely, as our goal is broad dissemination to facilitate accurate classification of Inpatient Rehabilitation Facility (IRF) patients with the Case Mix Group (CMG) classification system.

## ***Changes with CMG Version 5.30 and JAR Version 5.30.0***

Processing changes with version 5.30, in addition to allowing processing of IRF-PAI assessments with discharge date on or after 10/1/2023, includes the addition of 17 ICD-10-CM codes: A41.54, D57.04, D57.214, D57.814, D61.02, J15.61, J15.69, K35.200, K35.201, K35.209, K35.210, K35.211, K35.219, K68.2, K68.3, O90.41, O90.49 added to Tier 3 (D). It also includes the deletions of four ICD-10-CM codes: J15.6, K35.20, K35.21, O90.4 from Tier 3 (D). Additionally, it includes the label changes of two ICD-10-CM codes: I71.51 and I71.52 in Tier 3 (D). The code changes are indicated in Appendix C of this document "Comorbidity Tier Code Lookup Table."

## ***Program Logic***

This section explains how the CMG JAR calculates CMG group codes. The methodology employed by the JAR follows the methodology described in the IRF regulations published by CMS. This document is aimed primarily at software developers who do not wish to use the JAR furnished by CMS and who need to develop their own software to calculate CMG groups.

Programmers who **do** wish to use CMS's JAR should refer to the Technical Documentation which accompanies this package. Familiarity with the program documentation contained in the present document is **not** required to use the JAR correctly.

## ***Overview***

Calculation of a CMG group from an IRF-PAI assessment record requires the following steps:

1. Read required items from the IRF-PAI record.
2. Ensure there are no data errors in the IRF-PAI items used.
3. Calculate preliminary variables.
4. If no data errors are found, compute the CMG group code.

5. Return the results: the CMG group code and an error code. Each of these steps is detailed below.

## Read Required Items

Only a subset of the items contained in the IRF-PAI assessment record is required to perform the CMG group calculation. Appendix A lists the required items. This appendix is derived from, and uses the conventions used in, the IRF-PAI data specifications. Please refer to the data specifications for details.

Appendix A contains the following columns:

- **Database name.** The item name used in CMS' standard data specifications and IRF-PAI database.
- **Form location.** The item number used on the IRF-PAI assessment form.
- **Description.** A description of the item.
- **Length.** The length of the item.
- **Start byte.** The starting position of the item in the standard fixed format string defined in the data specifications.
- **End byte.** The ending position of the item in the standard fixed format string.
- **Range.** A range or list of valid values.

The first step for a calculation routine is to read or obtain the values of the items listed in Appendix A.

## Ensure There Are No Data Errors

To correctly calculate the CMG classification, it is necessary to ensure that all IRF-PAI items used have valid, well-formatted values. If there are invalid values or mis-formatted items, then a CMG calculation will produce unreliable results. IRF-PAI assessment data that has been submitted and accepted by the CMS IRF-PAI system have passed all critical edits and are ensured to have valid, well-formatted values, allowing correct CMG classification.

If the IRF-PAI assessment has not been accepted by the CMS IRF-PAI system, then the next step for a calculation routine will be to check the values of all of the items listed in Appendix A to make sure they all have valid and correctly formatted values. There are two ways to check item value and format validity.

1. Use the IRF-PAI Validation Utility Tool (VUT) provided by CMS which can be accessed from the QIES Technical Support Office (QTSO) web site (<https://qtso.cms.gov>).
2. Develop custom code to ensure valid values and correct formatting for the items in Appendix A. Please refer to the IRF-PAI Data Submission Specifications. If any data errors are detected, the CMG group must not be calculated (an error code should be set appropriately).

To develop custom error checking code to test for data errors for the Appendix A items, do the following:

1. Check to make sure that each item conforms to the range specifications contained in the last column of Appendix A.  
The first two items in Appendix A (ASMT\_SYS\_CD and TRANS\_TYPE\_CD) are not actually involved in the CMG calculations. However, the JAR and standard CMG logic check these items and return error codes if the items do not have the expected values. ASMT\_SYS\_CD should be a value of "IRF-PAI" indicating an IRF-PAI record and TRANS\_TYPE\_CD should be a value of "1" (new assessment record) or "2" (modified assessment record) but not "3" (record inactivation request).
2. Check to make sure that the ICD10 comorbidity fields (items 24A through 24Y) have a valid format. To be valid, the item must be caret [^] (indicating a blank item), or it must be in an 8-character fixed format string as follows:
  - a. Character 1 must be alphabetic.
  - b. Character 2 must be numeric [0-9].
  - c. Character 3 must be numeric [0-9] or alphabetic [A-Z, a-z].
  - d. Character 4 must be a decimal point.
  - e. Characters 5 through 8 must be numeric [0-9], alphabetic [A-Z, a-z], or caret [^].
  - f. If any character 5 through 8 is equal to [^], all subsequent characters must equal [^].

- For the items 24A through 24Y, if a comorbid condition item is blank or "No information" (represented by a single caret, [^]), then the next comorbid condition item in the list must be "No information" [^].

## Calculate Preliminary Variables

Several preliminary variables must be calculated before determining the CMG group. If any of these preliminary calculations result in invalid values, the CMG group must not be calculated – an error code should be set appropriately instead. The following sections describe the preliminary calculations.

## Motor Score

The Motor Score is derived from 18 variables. To compute the motor score, do the following:

- Use the input value from the assessment in the calculation of the motor score unless the value is one that requires recoding. If the input value for any of the 16 variables identified in the table below is equal to 7, 9, 10, 88, or contains a missing value (i.e. "-", "^") then recode these values to the value shown in the third column of the table below. (Note that all variables are recoded to 1 except for Item GG0170F1 which is recoded to 2).

Variable	Item	Recode 7, 9, 10, 88 or missing values to:
Eating	GG0130A1	1
Oral hygiene	GG0130B1	1
Toileting hygiene	GG0130C1	1
Shower/bathe self	GG0130E1	1
Upper-body dressing	GG0130F1	1
Lower-body dressing	GG0130G1	1
Putting on/taking off footwear	GG0130H1	1
Sit to lying	GG0170B1	1
Lying to sitting on side of bed	GG0170C1	1
Sit to stand	GG0170D1	1
Chair/bed-to-chair transfer	GG0170E1	1
Toilet transfer	GG0170F1	2
Walk 10 feet	GG0170I1	1
Walk 50 feet with two turns	GG0170J1	1
Walk 150 feet	GG0170K1	1
One-step curb	GG0170M1	1

- The 2 remaining variables included in the motor score calculation follow separate recoding procedures. Both variables must first be recoded due to the clinical characteristics of the patient in certain instances. Next, the response codes are adjusted so that the minimum score will be 1 to be consistent with the minimum score of the other items in the motor score. Finally, the scores for these items are reversed for inclusion in the motor score calculation.

To recode, adjust, and reverse the scores for the bladder continence item, perform the following steps:

- If the input value for the variable identified in the table below is equal to 1, 5, 9 or contains a missing value (i.e. "-", "^") then recode these values to the value shown in the fourth column of the table.

Variable Name	Item	Value present:	Recode to:	Final Score Assignment:
Bladder continence	H0350	0		4
		1	0	4
		2		3
		3		2
		4		1
		5	0	4
		9	4	1
		Missing	0	4

- After performing the recoding for the values identified above, adjust the scale by subtracting 1 from each score when a score is greater than or equal to 2.
- Finally, reverse the scale so that higher function is reflected by higher scores. To determine the final score assignment, subtract 4 from the adjusted score and calculate the absolute value of the resulting number. The final score assignment for each value is identified in the fifth column of the table.

To recode and reverse the scores for the bowel continence item, perform the following steps:

- If the input value for the variable identified in the table below is equal to 9 or contains a missing value (i.e. "-", "^") then recode these values to the value shown in the fourth column of the table.

Variable Name	Item	Value present:	Recode to:	Final Score Assignment:
Bowel continence	H0400	0		4
		1		3
		2		2
		3		1
		9	2	2
		Missing	0	4

- After performing the recoding for the values identified above, reverse the scale so that higher function is reflected by higher scores.

To determine the final score assignment, subtract 4 from the score and calculate the absolute value of the resulting number. The final score assignment for each value is identified in the fifth column of the table.

The motor score is the sum of the values of the 18 variables identified above. If any of the 18 variables has an out of range value, then the motor score is invalid and the CMG group must not be computed. A valid motor score will be in the range 18 through 104 inclusive.

## Age

Age is computed on the basis of the difference between the admission date (ADMSN\_DT, item 12) and the birth date (BIRTH\_DT, item 6). The IRF-PAI data specifications allow facilities to submit partial birth dates if the month or day of birth is unknown.

The steps below describe how to handle partial birth dates and how to calculate age.

1. Impute month and/or day of birth if partial birth date is present.
  - a. If month of birth is blank:
    - i. Partial birth date is present.
    - ii. Replace blank month with "06" (June).
  - b. If day of birth is blank:
    - i. Partial birth date is present.
    - ii. Replace blank day with "15".
  - c. If a partial birth date was submitted and if the birth year is equal to the admission year, then age cannot be calculated.
2. If a partial birth date is present, then use the imputed birth date, as described above, in the steps below. Otherwise, use the input birth date.
3. Check the birth date to determine whether it is a valid date. If it is invalid, then age cannot be calculated.
4. Check the admission date to determine whether it is a valid date. If it is invalid, then age cannot be calculated.
5. If the admission date precedes the birth date, then age cannot be calculated.
6. Calculate age in years by comparing the birth date with the admission date. Use the following rules:
  - a. If the admission month is less than the birth month, then age is equal to the difference in years, minus 1.
  - b. If the admission month is greater than the birth month, then age is equal to the difference in years.
  - c. If the admission month is equal to the birth month, then examine the birth and admission days:
    - i. If the admission day is less than the birthday, then age is equal to the difference in years, minus 1.
    - ii. Otherwise, age is equal to the difference in years.
7. If the computed age is greater than 140, then age is invalid and the CMG group cannot be computed.

If age cannot be computed, then the CMG group cannot be computed. A valid age will be in the range 0 through 140, inclusive.

### **Look Up Rehabilitation Impairment Code (RIC)**

The impairment group code at admission, IMPRMNT\_GRP\_ADMSN\_CD (item 21A), is matched with an impairment group code in Appendix B to obtain the RIC code from Appendix B.

The IMPRMNT\_GRP\_ADMSN\_CD value submitted always has 2 leading zeros (0) at the front. These two initial zeros are not present in the impairment group codes in Appendix B.

Trim the two leading zeros from IMPRMNT\_GRP\_ADMSN\_CD before matching with the impairment group values in Appendix B.

If the trimmed IMPRMNT\_GRP\_ADMSN\_CD exactly matches one of the impairment group codes in column 3 of Appendix B, then the RIC code is the corresponding code in column 1.

If the trimmed IMPRMNT\_GRP\_ADMSN\_CD does not exactly match any of the impairment codes listed in Appendix B, then the RIC code cannot be determined and the CMG group cannot be computed.

## Compute CMG Group Code

Once the motor score, age, and RIC have been determined, the CMG group code can be determined. The group code consists of a comorbidity tier code (A, B, C, or D) followed by a four-digit group number. These items are determined using the following steps.

1. Determine the tier code.

- a. The tier code is determined using the IRF-PAI assessment comorbidity condition ICD10 codes (listed below) and the RIC code in conjunction with Appendix C. The comorbidity condition ICD10 codes are as follows:
  - i. CMRB\_COND\_A\_CD (item 24A)
  - ii. CMRB\_COND\_B\_CD (item 24B)
  - iii. CMRB\_COND\_C\_CD (item 24C)
  - iv. CMRB\_COND\_D\_CD (item 24D)
  - v. CMRB\_COND\_E\_CD (item 24E)
  - vi. CMRB\_COND\_F\_CD (item 24F)
  - vii. CMRB\_COND\_G\_CD (item 24G)
  - viii. CMRB\_COND\_H\_CD (item 24H)
  - ix. CMRB\_COND\_I\_CD (item 24I)
  - x. CMRB\_COND\_J\_CD (item 24J)
  - xi. CMRB\_COND\_K\_CD (item 24K)
  - xii. CMRB\_COND\_L\_CD (item 24L)
  - xiii. CMRB\_COND\_M\_CD (item 24M)
  - xiv. CMRB\_COND\_N\_CD (item 24N)
  - xv. CMRB\_COND\_O\_CD (item 24O)
  - xvi. CMRB\_COND\_P\_CD (item 24P)
  - xvii. CMRB\_COND\_Q\_CD (item 24Q)
  - xviii. CMRB\_COND\_R\_CD (item 24R)
  - xix. CMRB\_COND\_S\_CD (item 24S)
  - xx. CMRB\_COND\_T\_CD (item 24T)
  - xxi. CMRB\_COND\_U\_CD (item 24U)
  - xxii. CMRB\_COND\_V\_CD (item 24V)
  - xxiii. CMRB\_COND\_W\_CD (item 24W)
  - xxiv. CMRB\_COND\_X\_CD (item 24X)
  - xxv. CMRB\_COND\_Y\_CD (item 24Y)
- b. The default tier code is "A" (i.e., if no match is found in Appendix C, as described below, then the tier code is "A").
- c. Appendix C is the Comorbidity TIER List published by CMS. See the descriptive comments at the beginning of Appendix C. The single ICD-10-CM codes starting at the beginning of the table allow easy row by row lookup. The code combinations (always pairs with this version) at the bottom of the table define pairs of codes that must both be present but the codes in a pair are not presented together, and do not allow an easy automated lookup. For this reason, a revised lookup source was created for the CMS JAR.

For the CMS provided JAR, the following reformatting was made to the information in Appendix C:

The single codes are padded with carets [^] to length 8 to match the ICD-10-CM formatting required on IRF-PAI assessment items. The single codes were then separated into two lists:

- i. Single Code List 1 containing all single codes not included in a code combination. This table includes the single codes not listed below for Single Code List 2.

- ii. Single Code List 2 containing all single codes also included in a code combination. Only 48 of the single codes are included in code combinations and these codes are:

A special "Exclusion Flag" column was added to Single Code List 2. This logical flag will be set to True if the single code in Single Code List 2 is to be excluded because a code combination (in the Code Combination List) involving that single code is present on the IRF-PAI assessment and the combination is excluded due to the assessment's RIC.

If the Exclusion Flag has been set to True for a code in Single Code List 2, then that single code will be excluded from tier assignment.

The Single Code List 1 and Single Code List 2 were each sorted ascending by Tier number, allowing easy lookup of the highest payment Tier.

The code combinations were put in a reorganized Code Combination List. The code combination list has columns for 2 different ICD-10-CM codes (in this version combinations always involve a pair of codes) and contains a row for the two ICD-10-CM codes in each pair of codes involved in a combination, allowing easy lookup. The two ICD-10-CM codes in a row are padded with carets [^] to length 8 to match the ICD-10-CM formatting required on IRF-PAI assessment items. Since all combination pairs involve Tier 3 (lowest paying), the Code Combination List can be processed after the Single Code List 1 and ensure that the Tier for the first match found is the highest payment Tier.

- d. In the Single Code List 1 loop through each of the rows to attempt to find a comorbidity Tier match as follows:
    - i. Determine whether the RIC code for the assessment is in the RIC exclusion list in the column labeled "RIC Exclusion" in the Single Code List 1. If the RIC code is in the exclusion list, then skip to the next row of the Single Code List 1. If the inclusion entry is blank, then no RICs are excluded for that row.
    - ii. If the RIC code is not in the RIC exclusion list or if the RIC exclusion list is blank, then do the following:
      - (1) Loop through the comorbidity condition ICD10 codes listed above (CMRB\_COND\_A\_CD through CMRB\_COND\_Y\_CD) and determine whether the comorbidity condition ICD10 code exactly matches the ICD10 code listed in the Single Code List 1.
        - (a) If the comorbidity condition code equals a single caret [^], then no more comorbidity conditions are present. Go to the next Single Code List 1 row.
        - (b) If there is an exact match between the comorbidity condition ICD10 and the Single Code List 1 ICD10, then do the following:
          - (i) Determine the tier code by examining the column labeled "Tier" in Single Code List 1.
          - (ii) If there is a "1" in the "Tier" column of Single Code List 1, then the tier code is "B".
          - (iii) If there is a "2" in the "Tier" column of Single Code List 1, then the tier code is "C".
          - (iv) If there is a "3" in the "Tier" column of Single Code List 1, then the tier code is "D".
          - (v) Terminate Tier code lookup and go to Step 3 "Determine four digit group number" below.
        - (c) If there is not an exact match between the comorbidity condition ICD10 and the Single Code List 1 ICD10, then go to the next comorbidity condition code.
  - e. Process the Code Combination List if no match was found in Single Code List 1 as follows:
    - i. Set the Exclusion Flag in Single Code List 2 to False for all codes.
    - ii. Loop through each of the rows in Code Combination List to attempt to find a comorbidity Tier match.
2. For each row in Code Combination List, loop through the comorbidity condition ICD10 codes listed above (CMRB\_COND\_A\_CD through CMRB\_COND\_Y\_CD) and determine whether the comorbidity condition ICD10 code exactly matches one of the two ICD10 codes listed in the Code Combination List.

- a. If the comorbidity condition code equals a single caret [^], then no more comorbidity conditions are present. Go to the next Code Combination List row.
- b. If there is an exact match between the comorbidity condition ICD10 and one of the two Code Combination List ICD10s, set a flag indicating which of the two codes has been matched.
- c. If both Code Combination List ICD10's have been matched, then do the following:
  - i. Determine whether the RIC code for the assessment is in the RIC exclusion list in the column labeled "RIC Exclusion" in the Code Combination List. If the exclusion entry is blank, then no RICs are excluded for that row. If the RIC code is in the exclusion list, then:
    - (1) Locate each of the two codes in Single Code List 2 and, if found set the Exclusion Flag to True in Single Code List 2 for the code.
    - (2) Skip to the next row of the Code Combination List.
  - ii. If the RIC is not excluded then:
    - (1) Determine the tier code by examining the column labeled "Tier" in Code Combination List.
    - (2) If there is a "1" in the "Tier" column of Code Combination List, then the tier code is "B".
    - (3) If there is a "2" in the "Tier" column of Code Combination List, then the tier code is "C".
    - (4) If there is a "3" in the "Tier" column of Code Combination List, then the tier code is "D".
    - (5) Terminate Tier code lookup and go to Step 3 "Determine four digit group number" below.
- d. If there is not an exact match between the comorbidity condition ICD10s and both of the Code Combination List ICD10s, then go to the next row of Code Combination List.
- e. Process Single Code List 2 if no match was found in Code Combination List as follows:
  - i. For each row of Single Code List 2, determine whether the RIC code for the assessment is in the RIC exclusion list in the column labeled "RIC Exclusion" in the Single Code List 2. If the RIC code is in the exclusion list, then skip to the next row of the Single Code List 2. If the inclusion entry is blank, then no RICs are excluded for that row.
  - ii. Exclude the single ICD-10-CM code if the Exclusion Flag had been set True during processing of Code Combination List.
  - iii. If the single ICD-10-CM code has not been excluded, then do the following:
    - (1) Loop through the comorbidity condition ICD10 codes listed above (CMRB\_COND\_A\_CD through CMRB\_COND\_Y\_CD) and determine whether the comorbidity condition ICD10 code exactly matches the ICD10 code listed in the Single Code List 2.
      - (a) If the comorbidity condition code equals a single caret [^], then no more comorbidity conditions are present. Go to the next row.
      - (b) If there is an exact match between the comorbidity condition ICD10 and the Single Code List 2 ICD10, then do the following:
        - (i) Determine the tier code by examining the column labeled "Tier" in Single Code List 2.
        - (ii) If there is a "1" in the "Tier" column of Single Code List 2, then the tier code is "B".
        - (iii) If there is a "2" in the "Tier" column of Single Code List 2, then the tier code is "C".
        - (iv) If there is a "3" in the "Tier" column of Single Code List 2, then the tier code is "D".

- (v) Terminate Tier code lookup and go to Step 3 “Determine four digit group number” below.
  - (c) If there is not an exact match between the comorbidity condition ICD10 and the Single Code List 2 ICD10, then go to the next comorbidity condition code.
- 3. If no comorbidity Tier match was found, then the tier code is “A”.
- 4. Determine the four digit group number. The group number is determined using the RIC code, the motor score, and the age in conjunction with Appendix E. The procedure is as follows:
  - a. Loop through the rows of Appendix E until a match is found. A match is determined as follows:
    - i. The RIC code must match the code listed in column 2 of Appendix E.
    - ii. The motor score must be greater than or equal to the “motor score low value” listed in column 3 and less than or equal to the “motor score high value” listed in column 4 of Appendix E.
    - iii. If the “age low value” in column 5 and the “age high value” in column 6 are both nonblank, then the age must be greater than or equal to the age low value and less than or equal to the age high value listed in Appendix E.
  - b. When a match is found in Appendix E, then the CMG group number is equal to the code listed in column 1 of Appendix E.

## ***Return Results***

The CMG group code is created by concatenating the tier code and the group number. For example, if the tier code is “A” and the group number is “0114”, then the CMG group code is “A0114”.

As noted above if any of the data items used in the calculations are out of range or invalid or if the motor score, age, or RIC code are invalid or cannot be computed, the CMG group code must not be computed. An appropriate error code should be set to identify the error condition.

## ***Testing***

Standard test data is available in the CMG 5.30. The standard test data is described in the “Technical Documentation”. For applications rewriting CMG from scratch, custom test data should also be developed and used, in addition to the standard test data. The custom test data should test all CMG calculations, including calculation of the motor score and age; correct RIC lookup for all impairment codes at admission (Item 21A); correct CMG group lookup; and correct comorbidity tier assignment for each single comorbidity code and code combination (always a pair of codes for this version).

## **Appendix C: Comorbidity Tier Code Lookup Table**

Note that this appendix is the Comorbidity Tier Lookup List Published by CMS for October 1, 2021 and beyond.

When the “Choice” column in this appendix is blank, this indicates a “single” ICD-10-CM code that qualifies for tier assignment. There are three single code tables for Tier 1, Tier 2, and Tier3, respectively. Tier assignment also occurs based on ICD-10-CM code combinations which are given in the remaining tables after the single code tables. In the combination results, there is a separate table for each ICD-10-CM combination. In a combination, the codes have an “A” or “B” in the Choice column. Most combinations involve a single “A” code and a single “B” code and tier assignment is based on the pair of codes being present in the IRF-PAI assessment. More complex combinations have multiple “A” codes and/or multiple B codes. For example, the last combination at the bottom of the appendix has 5 “A” codes and 2 “B” codes. In this case, each “A” is combined with each “B”, yielding 10 code pairs. Tier assignment is based on any of these 10 pairs being present in the assessment.

In this appendix, the single code tables are followed by the code combination tables. Each table is sorted by the “ICD-10-CM” column.

**Table C-1. Codes Assigning Tier 1**
